

## **Three-way loading valve Codeiron ®**

The three-way loading valve for the NGV dispenser is a spherical three-way valve that allows the manual opening and closing of itself for the passage of gas.

The loading valve is used for each dispensing hose separately.

One of the advantages of this valve is that, unlike many others in the market, it is designed to have the best performance, performing much more opening and closing cycles than other valves.

Moreover, it is light and smooth to turn its handle, that makes it easy to operate by men and women.

Excellent materials, (made entirely of stainless steel and peek) give longer life to the sphere and closing entries, avoiding losses, and an unbreakable handle for high impact.

Other brands in the market are manufactured in brass and do not last very long. Handles get broken easily because they are made of very hard plastics.

We manufacture a maintenance kit for the solenoid valve, so that its lifetime is very long.

It is available in measure 1/4 NPT female connection. (Please see the attached technical features).
